TARIFF FORMAT

A. Page Numbering - Page numbers appear in the upper right corner of the page. Pages are numbered sequentially. However, new sheets are occasionally added to the tariff. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.

B. Page Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current sheet version on file with the ACC. For example, the 4th revised Page 14 cancels the 3rd revised Page 14.

C. Paragraph Numbering Sequence - There are seven levels of paragraph coding. Each level of coding is subservient to its next higher level:

- 2.
- 2.1.
- 2.1.1.
- 2.1.1.A.
- 2.1.1.A.1.
- 2.1.1.A.1.(a).
- 2.1.1.A.1.(a).I.

D. Check Sheets - When a tariff filing is made with the ACC, an updated Check Sheet accompanies the tariff filing. The Check Sheet lists the sheets contained in the tariff, with a cross reference to the current revision number. When new sheets are added, the Check Sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on this sheet if these are the only changes made to it (i.e., the format, etc. remain the same, just revised revision levels on some sheets.)

3.3 Time of Day Rate Periods, (Cont'd.)

- 3.3.1 Day, Evening, and Night/Weekend times are determine by the local time of the location of the calling service point. Chargeable time for a rate period (e.g. 8AM-5PM) begins with the first stated hour (8AM) and continues to, but does not include, the second stated hour (5PM). The rate applicable at the start of chargeable time at the calling station applies to the call during the duration of the call that is applicable to that time period. If a call begins in one discount period and ends in another, the initial period discount applied is the discount in effect at the time the call is established. The charge for each additional minute of usage is the additional minute billing rate of the rate period in which the beginning of each minute occurs.
- 3.3.2 The time when connection is established is determined in accordance with the time - standard or daylight savings -legally or commonly in use at the location of the calling service point and determines whether Day, Evening, Night or Weekend rates apply. SECTION 3 - DESCRIPTION OF SERVICE AND RATES, (CONT'D.)**3.4 Calculation of Distance**

For services which are distance sensitive, usage charges are based on the airline distance between the serving wire center locations associated with the originating and terminating points of the call.

The distance between the originating and terminating points is calculated by using the "V" and "H" coordinates of the serving wire centers as defined by BellCore (Bell Communications Research), in the following manner:

- Step 1: Obtain the "V" and "H" coordinates for the serving wire center of the Customer's switch and the destination point.
- Step 2: Obtain the difference between the "V" coordinates of each of the serving wire centers. Obtain the difference between the "H" coordinates.
- Step 3: Square the differences obtained in Step 2.
- Step 4: Add the squares of the "V" difference and "H" difference obtained in Step 3.
- Step 5: Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.
- Step 6: Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the originating and terminating serving wire centers of the call.

Formula:

$$\sqrt{\frac{(V_1 - V_2)^2 + (H_1 - H_2)^2}{10}}$$
